

# Data Analysis Group Projects Contribution Form

Group #

1

Name: Juntao Tian

GUID: 2700298T

Here you will assess your personal contribution to the group project, as well as that of your fellow group members. Contribution to the group project may consist of the following:

- attending arranged group meetings;
- analysis of the data set via writing R code and/or interpretation of the results;
- writing the groups findings and sections of the report; and
- being cooperative and supportive throughout the project.

Below you will find a table in which you should write the names, including your own on the first line, of each member of your group, as well as what you believe the percentage contribution was from each group member. For example, if your group contains four members who all equally contributed then each member should receive 25% contribution. You should also place a tick in the box of the group member who is responsible for submitting the group report on Moodle.

Group member	Percentage contribution	Report submission
<u>Juntao Tian</u>	<u>40%</u>	<input checked="" type="checkbox"/>
<u>Yuxin Zhang</u>	<u>20%</u>	<input type="checkbox"/>
<u>Yijia Sun</u>	<u>20%</u>	<input type="checkbox"/>
<u>Mike Ji</u>	<u>20%</u>	<input type="checkbox"/>

Your final grade for the group project will take into account your contribution.

**Comment on what you believe your contribution was to the group project:**

In my opinion, I think I have done much contribution to our group project. First of all, I contacted our group members one by one and organized a team group for discussion of the project as the group leader. In addition, I held a few meetings to share ideas related to the project with my teammates together and tried my best to deal with the problems we encountered. More specifically, I not only finished my own task which was the Formal analysis part of the project, but also helped my teammates polish the Introduction part as well as the Conclusion part. Last but not least, I checked our report before submitting it on the Moodle for fixing some small problems such as typos.

**Comment on how you feel your group collaborated during the group project:**

In terms of our group collaboration, we divided our project into 4 parts which include Introduction, Exploratory analysis, Formal analysis and Conclusions. At the very beginning, Yuxin Zhang was responsible for Introduction part, Yijia Sun was responsible for Exploratory analysis part, I was responsible for Formal analysis part and Mike Ji was responsible for Conclusions part. However, as the project progressed, I spent some extra time on helping my teammates such as refining the Exploratory analysis part and polishing the Introduction as well as the Conclusions since I completed my own task in advance. So I was quite satisfied and proud because I managed to overcome the difficulties and take on the responsibility of being a group leader.
